CPD Overview

Balco has been delivering smart balcony systems and glazing solutions since the company was founded in 1987.

We are immensely proud of all our innovative products which have improved quality of life for many people.

Balco design, manufacture off-site, deliver, install and warranty our entire Balco product range, ensuring value for money and ease of implementation, as all elements are consolidated under one provider. Our systematic approach and full accountability to a project, ensures a consistently high quality product and service to our customers.

Balco design to the relevant Euro codes and can confirm that any balconies delivered through any of our projects will have a minimum service life of 60 years.

Balco can incorporate our specialist design works to ensure a robust developed design for the balconies. Our balconies can be designed to tailor the style of the building and materials used on the façade. We employ over 40 dedicated design staff who will be able to work on any balcony project, along with our in-house structural engineering team, who will conduct all the necessary calculations.

Balco's key production facility is located at our HQ in Växjö, Sweden. Växjö produces the majority of Balco's products for the UK.
