Acoustics: The key to happier and healthier workspaces?

This seminar aims to educate designers, architects and facility managers about the need to consider acoustics at the start of a project. During the session, attendees will be exposed to a mix of typical background noises to experience, from an evolutionary perspective, the positive as well as negative effects on their mental health and physical well-being. This will serve as a basis to better work around those different sound exposures and thus create a working climate in which workers will feel more comfortable and closer to nature. By the end of the CPD you should have a greater understanding of:

- How sound can be mastered and balanced with examples from different case studies
- Why you should introduce more biophilic and biometric designs and how these can contribute to creating better acoustic treatments
- How to create a perfect 'sound frame' for quiet and happier workspaces

This CPD can be delivered to you live and remotely.

Material type: Online Learning, Seminar
RIBA Core Curriculum: **Design, construction and technology**
Health, safety and wellbeing
Knowledge level: General Awareness

The Power of Acoustic Lighting

Happiness, health, and well-being have never been higher on the agenda of organizations worldwide. This course will showcase how adequate acoustics and lighting play a key role on mental health and physical well-being in the workspace. The course will also help designers, architects and facility managers to get a better understanding of the importance of considering acoustics and acoustic lighting at the start of each project. After this session, acoustic lighting will no longer be an afterthought.
