CPD Overview

The company specialise in flue and duct restoration. The composite flue and duct liners we provide are unique because they expand from within and react and harden with steam. This allows them to mould to the exact shape and size of the flue or duct. Kompozit'all UK has a broad client base which covers many applications and sectors from residential houses to schools, hotels, restaurants and tower blocks.

We provide 2 brands: FuranFlex 25 liners for heating and VentilFlex 25 for ventilation and kitchen extraction.

Kompozit'all UK train, supply and support installation partners throughout the UK to operate and install these products correctly, maintaining the quality of the product and service. Having these liners fitted by the most experienced hands means all linings done by a Kompozit'all UK registered installers carry a 25 year guarantee against manufacturing faults.

Restoring Flues, Ducts & Pipes

The objective of this CPD is for everyone attending to be aware of the principles that apply to chimneys and various linings that might be considered, not just in large and historic properties, but also with current technology. The question of restoring, rather than replacement of existing flues/ducts can then be considered as a realistic option.

A current problem exists with the costly and time consuming practice of replacing 'condemned' ventilation ducting, for example in commercial kitchen extraction application; which can be answered in this seminar with proposals that provide solutions.

In summary, this CPD will offer an understanding of traditional knowledge and skills with how they have been applied using modern developments, to solve today's challenges, right up to ventilation, kitchen extraction and commercial heating.
